

REPORT ENHANCEMENT

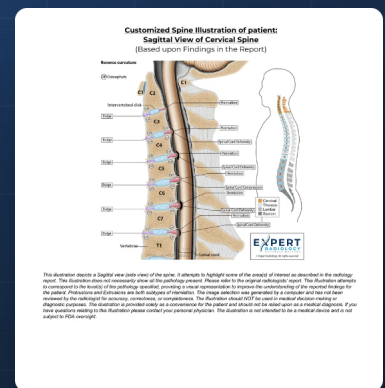

# Any report in. A PrecisionPlus v3™ out.

Send us an existing radiology report plus the key images. We add the PrecisionPlus v3™ visual layer: custom medical illustrations and colorized key images that make the interpretation easier to understand and use.

TEXT REPORT → VISUAL REPORT PACKAGE

**Existing report**  
Clinical text interpretation

**Enhanced report**  
PrecisionPlus v3™ visual layer

Report Enhancement adds a separate visual layer to an existing report. It does not edit, overwrite, or replace the original radiologist's interpretation.

# What changes after enhancement.

A standard report carries the clinical interpretation. Enhancement keeps that interpretation intact and adds a PrecisionPlus v3™ visual layer around the existing report.

FEATURE	Standard report	Enhanced report <span>PLUS V3™ LAYER</span>
<b>Original interpretation</b>	Clinical text interpretation.	✓ Preserved and not overwritten.
<b>Key images</b>	Referenced in text, often left for readers to interpret.	✓ Selected, annotated, and colorized for easier review.
<b>Medical illustrations</b>	Typically not included.	✓ Patient-specific visual explanation added.
<b>Report usability</b>	Requires translation for non-radiology readers.	✓ Easier for providers, patients, attorneys, and reviewers to understand.
<b>Workflow</b>	Client sends the report and key images.	✓ Portal, secure upload, or PACS routing when scoped.
<b>Final deliverable</b>	Original report document.	✓ Visual report package built around the existing report.
<b>Explanation layer</b>	Readers translate clinical text on their own.	✓ Visual explanation helps non-radiology readers follow the findings.

# What we do during enhancement.

Send us the existing report and key images. We build a separate PrecisionPlus v3™ visual layer around the original read.

## Existing report and images come in

Your team sends the text report plus the key images needed to scope the enhancement.

## We build the visual layer

Expert Radiology adds custom medical illustrations, selected key images, annotations, and colorization.

## Your team receives the enhanced report

The final package is built around the existing report, with the original interpretation preserved.

## What gets added

Custom illustrations, colorized key images, clearer visual explanation, and no overwrite of the original read.

# Why enhance the report?

The value is clearer communication around the interpretation buyers already need to explain, review, and use.

01

## Clarity

Makes findings easier to show and discuss by pairing the existing interpretation with colorized key images and custom visual explanation.

02

## Communication

Reduces the burden of translating text-only findings for patients, referring providers, legal teams, and other non-radiology readers.

03

## Differentiation

Gives imaging centers and providers a stronger report experience without requiring a new scan, vendor switch, or replacement interpretation.

04

## Case review

Helps legal and lien teams evaluate imaging more efficiently without overstating legal outcomes or changing what the imaging supports.

05

## Confidence

Gives clinical, operations, and review teams a stronger shared visual reference when discussing the report.

# Make Radiology Understood.
